

Industrial Control Panels

UL508A | Control panels for industrial applications

Engineered industrial control panels with PLC-based control and a front-door HMI. Coordinate control functions, power monitoring and BMS or SCADA interfaces around your application.

Project configuration

- PLC and I/O integration
- Front-door HMI operator interface
- Power and control component layout
- Field wiring and terminal requirements
- BMS and SCADA interface planning
- Enclosure selection for the installation environment

Include with your inquiry

- Electrical drawings and sequence of operation
- Incoming voltage, phase and load schedule
- Required short-circuit current rating
- Preferred components and control devices
- Enclosure size, environment and installation details

Product illustration

Component selection, final electrical ratings and UL508A certification requirements are confirmed for each project.
