

Utility Tap Boxes

Engineered utility connection and bus termination

Define a utility tap box around your service connection and enclosure requirements. Atlas coordinates the busbar interface, insulated supports and access arrangement with your project and serving utility.

Project configuration

- Service connection enclosure
- Busbar interface and termination layout
- Insulated busbar supports and entry interface
- Enclosure dimensions and access planning
- Utility and installation coordination

Include with your inquiry

- Serving utility and connection requirements
- System amperage, voltage and phase
- Required busbar and termination arrangement
- Mounting, environment and enclosure dimensions

Edited product illustration

Final construction, clearances, ratings and utility acceptance require project-specific engineering review.
